DETAILED ACTION

Claim Objections

1. The amendment filed 11/20/01 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows:

In page 4, line 10, applicant replaces “bar-like silicon crystallites” with “needle-shaped silicon crystallites”. This is new matter introduced to the specification.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 1, 3, 6, and 9 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In claims 1, 3, 6, and 9, the term “needle-shaped silicon crystallites” is new matter.

3. Claims 1, 3, 6, and 9 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

In claims 1, 3, 6, and 9, a plurality of "needle-shaped silicon crystallites" is claimed. However, fig. 11 and 12 disclose a stick-like picture. A needle-like shape should be pointy on one end or both ends.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohtani et al. (US 5,612,250) in view of Fonash et al. (US 5,994,164).

With regard to claims 1, 3, 6, and 9, Ohtani et al. disclose a polycrystalline film (col. 5, line 64 to col. 20, line 42) comprising:

- Containing metal atoms, nickel, having a density range of 1×10^{16} to 1×10^{19} atoms/cm³ on average, where the metal is a catalyst for metal induced crystallization of amorphous silicon (col. 1, line 27 to col. 2, line 45 and col. 8, lines 17-24);

- The polycrystalline silicon film comprises a plurality of bar-like silicon crystallites (fig. 2c), due to the way the crystal are grown and inherently forms the patterned feature (col. 8, lines 2-13 and col. 20, lines 35-41);
- The polycrystalline silicon film is formed on an insulating substrate (col. 17, lines 57-59);
- Ohtani do not disclose an electrical conductivity activation energy between 0.52 to 0.71 eV. However, Fonash et al. disclose forming a polycrystalline film with nickel as a catalyst element similar to Ohtani (Fonash col. 3, lines 38-49), where the conductivity activation energy is 0.52 eV @ 290°C (Fonash fig. 8b).

Therefore, it is obvious that a similar material would have a similar conductivity activation energy level.

With regard to claim 2, 4-5, and 7, please see the description of record.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
